

As a General Class Amateur Radio operator and an Electronics Technician I am very much against BPL. Any technology that proposes to send BROADBAND RF DATA over unshielded transmission lines has the potential to interfere with existing LISCENCED operators and EMERGENCY COMMUNICATIONS NETWORKS that are dependant on the HF BANDS.

I have seen personally what a broadband signal does to portions of the HAM RADIO BANDPLAN and I cannot believe that the FCC would even consider allowing ANY such transmitter to be installed that would cause interference on FCC regulated and LISCENCED EQUIPMENT
